

Nigranth Shah

✉ nigranth.17430@sakec.ac.in | ☎ +91-9152352574 | 💻 nigranth-shah-04n | 🌐 NigLabs-cmd

Professional Summary

Final-year B.E. student in **Artificial Intelligence & Data Science** with hands-on experience building end-to-end AI/ML systems, full-stack web apps, and generative AI tools. Passionate about transforming data into real-world solutions — from RAG pipelines and diffusion models to real-time computer vision. Actively seeking roles in AI/ML engineering or full-stack development.

Skills

Programming	Python	JavaScript	SQL	Java			
AI / ML	Scikit-learn	Pandas	NumPy	Matplotlib	LangChain	OpenCV	
Tools & Platforms	Git	GitHub	VS Code	Jupyter Notebook	Power BI		
Databases	MySQL	MongoDB					

Projects

RAG-Project

AI / NLP — Personal Project

🌐 NigLabs-cmd/RAG-Project

Python LangChain Vector DB LLM

- Built a **Retrieval-Augmented Generation** pipeline combining dense vector search with an LLM to deliver contextually accurate, knowledge-grounded answers with reduced hallucination.
- Implemented document ingestion, chunking, and embedding storage; integrated an LLM for response synthesis across multiple domain-specific corpora.

Aura-Studio

Generative AI / Creative Tool — Personal Project

🌐 NigLabs-cmd/Aura-Studio

Python JavaScript Gen AI Canvas API

- Developed a **browser-based creative studio** leveraging AI-driven image generation to produce and manipulate visual assets in real time with an interactive canvas front-end.
- Designed a low-latency UI abstracting model complexity, exposing intuitive prompt-engineering and style-adjustment controls for non-technical users.

Zen-Flow

Full-Stack Web Application — Personal Project

🌐 NigLabs-cmd/Zen-Flow

JavaScript Node.js MongoDB UI/UX

- Built a **mindful productivity & workflow management** app with a Node.js/MongoDB backend supporting task management, session tracking, and focus analytics.
- Applied UX research principles to craft a distraction-free interface; implemented adaptive patterns that respond to individual user work rhythms over time.

Sleep-Detection-OpenCV

Computer Vision — Academic Project

🌐 NigLabs-cmd/Sleep-Detection-OpenCV

Python OpenCV dlib Real-time ML

- Engineered a **multi-modal real-time sleep-state classifier** using facial landmarks, eye-aspect-ratio tracking, and movement analysis to distinguish five sleep states with confidence scoring.
- Integrated smart UX layer that auto-adjusts ambient music volume based on classified sleep state, eliminating false triggers common in single-cue systems.

Education

B.E. in Artificial Intelligence and Data Science

Shah and Anchor Kutchhi Engineering College, Mumbai

CGPA: 7.5 / 10

Class XII — HSC | Class X — ICSE

St. Rocks Jr. College (2022, 76%) • St. John's High School (2020, 91%)

Certifications

- Data Analytics with Power BI** — Infosys (ICT Academy), 2025
- Java Programming** — Spoken Tutorial, IIT Bombay
- SQL and Relational Databases** — Spoken Tutorial, IIT Bombay

Extracurricular & Achievements

- Volunteer**, Inter College Hackathon 2024 — event coordination and participant mentoring across multiple technical tracks.
